

## Security Questionnaire - Part 13

Q13: Does your organization encrypt consumer data you receive from the Plaid API data-at-rest?

Answer: Yes - We encrypt consumer data retrieved from the Plaid API using object/column level encryption.

Comment: All consumer data received from the Plaid API is encrypted both at the storage volume level and at the object/column level. This ensures that sensitive fields (such as account numbers and personally identifiable information) remain protected. Encryption keys are managed using a secure, industry-standard key management system (KMS).
