

## **Security Questionnaire - Cryptography (Q12)**

### **12: Does your organization encrypt data-in-transit between clients and servers using TLS 1.2 or better?**

Answer: Yes - We use TLS 1.2 or better for all client-server communications.

Comment: All client-server communications are secured using TLS 1.2 or higher, with support for TLS 1.3 where available. This ensures encryption of all data-in-transit, protecting against eavesdropping and man-in-the-middle attacks. Our systems are configured to reject insecure or deprecated protocols (such as SSL or TLS 1.0/1.1).
